Java Programming

Joyce Farrell

Java Programming Joyce Farrell

Java Programming, Third Edition, is written and designed specifically for students with no previous programming experience. Object-oriented techniques are introduced early, featuring short code examples that are built from the bottom up. This edition offers more thorough coverage of the basics, explanations and examples using the StringBuffer class, and an entire chapter devoted to Swing. This text is designed to teach Java to those studying programming for the first time, but is also appropriate for those building on experiences in another programming language.
