A synthesis of current knowledge about venoms and venomous reptiles, it contains a wealth of illustrations, including an 8-page color insert, that present a view of reptile toxinology from the whole animal to the glands producing venoms to the molecular models and the mechanisms of actions of the toxins themselves.

The book provides a context for understanding the range of activities present in venoms and supplies detailed information on many enzymes and toxins found in them, bringing into focus the worldwide extent of the occurrence and complexity of human envenomations by reptiles. It explores the unique and interesting results produced by collaborations between specialists from very different fields and how they can stimulate new and continued interest in research on venoms and the animals that produce them.
