Biodiversity Biotechnology and Man: Interdependence and Future Challenges Divya Jain

The diversity of life forms, so numerous that we have yet to identify most of them, is the greatest wonder of this planet. The biosphere is an intricate tapestry of interwoven life forms. Even the seemingly desolate arctic tundra is sustained by a complex interaction of many species of plants and animals, including the rich arrays of symbiotic lichens. The book before you offers an overall view of this biological diversity and carries the urgent warning that we are rapidly altering and destroying the environments that have fostered the diversity of life forms for more than a billion years. The source of the book is the National Symposium on Biodiversity, Biotechnology and man interdependence and future challenges March 26-28,2010.
