Urban Coding and Planning (Planning, History and Environment Series)

Urban Coding and Planning (Planning, History and Environment Series)

Urban Coding and Planning (Planning, History and Environment Series)

Urban codes have a profound influence on urban form, affecting the design and placement of buildings, streets and public spaces. Historically, their use has helped create some of our best-loved urban environments, while recent advances in coding have been a growing focus of attention, particularly in Britain and North America. However, the full potential for the role of codes has yet to be realized.

In *Urban Coding and Planning*, Stephen Marshall and his contributors investigate the nature and scope of coding; its purposes; the kinds of environments it creates; and, perhaps most importantly, its relationship to urban planning.

By bringing together historical and ongoing traditions of coding from around the world – with chapters describing examples from the United Kingdom, France, India, China, Japan, Australia, South Africa, the United States and Latin America – this book provides lessons for today's theory and practice of place-making.
