Clinical Data-Mining in Practice-Based Research: Social Work in Hospital Settings Irwin Epstein, Susan Blumenfield

Design more effective social work programs with research data from your clinical files! A well-planned research program helps social workers provide consistent, effective services to their clients, but stretched budgets and tight schedules make it difficult to find the resources for data gathering. *Clinical Data-Mining in Practice-Based Research* shows how you can use the existing records already kept by every health-care institution as your primary data source. By analyzing documented clinical information, you can do groundbreaking research and custom-tailor programs to fit the specific needs of your department. *Clinical Data-Mining in Practice-Based Research* draws from the experiences of members of the Mount Sinai Department of Social Work staff. By analyzing case data, these professionals were able to identify biopsychosocial factors that affected social-health outcomes. These practice-based research strategies helped social work professionals see their own work more clearly and helped improve the quality of direct services, interventions, new programs, and case evaluations. *Clinical Data-Mining in Practice-Based Research* shows the benefits of practice-based research, including:

- enhancing clinical and administrative functions
 - encouraging direct-service workers to become more reflective
 - fostering cooperation between social workers and other staff members
 - designing earlier, easier, and more effective interventions
 - contributing to continuing education for staff members
 - improving patient care and satisfaction
- The detailed discussions in this book will help you apply these techniques toward improving your own service. *Clinical Data-Mining in Practice-Based Research* offers fresh and exciting ideas that can be applied in small health-care agencies or giant medical centers. It will become a trusted reference for administrators, social workers, researchers, and educators in the field.
